ABM to perform energy efficiency upgrades in Georgia

MAY 28, 2012

Clean Technology Business Review

Madison County Schools is a public school district located in Danielsville, GA. Ensuring a comfortable learning environment for their students is critical.

ABM Building Solutions, a division of integrated facility solutions provider ABM, has been selected to partner with the Madison County, Georgia School District in the US to improve its K-12 educational learning environments.

ABM, through its Bundled Energy Solutions Program, will perform critical infrastructure improvements of the schools through an estimated \$5.5m in energy and operational cost savings.

ABM's Bundled Energy Solutions Program has been designed as a financial solution to meet clients' technical facility needs.

The major renovations are expected to be completed and new equipment installed and operational by August 2012.

Total synchronization of the buildings' control systems will be finished by October this year.

Madison County Schools superintendent Allen McCannon said, "ABM has been instrumental in Madison County Schools' plan to maintain efficient and functioning HVAC systems as well as lighting within our schools."

The project will also include improvements to indoor environmental quality within the buildings, including comfort conditions, lighting levels and outside air ventilation.

ABM will also retrofit the schools with new high-efficiency HVAC systems, high performance lighting technologies, high-efficiency water source heat pumps and an energy management control system.
