

Empower Training Services Instructor Featured in UE Systems' Q&A

UE Systems featured Joe Gierlach, ABM Franchising Group's Vice President of Technical Training and Support, in its ["Electrical Asset Reliability & Electrical Safety"](#) Q&A in August.

Gierlach was featured in the Q&A after he hosted a session during the [15th Annual Ultrasound World Conference](#) in May.

In the Q&A, Gierlach addresses a variety of topics, ranging from the risks of electrical hazards and what managers and employees must be aware of to safely deal with electrical hazards, as well as occupant safety and updates to the 2018 NFPA 70E standards.

Gierlach, along with ABM Franchising Group Director of Technical Training and Support Joe DeMonte, cover these topics and more in Empower Training Services' electrical safety seminars.

In the ["Electrical Safety in the Workplace"](#) seminar addresses electrical safety in the workplace, Gierlach and DeMonte cover Arc Flash, Arc Flash protection boundary and limits of approach, personal protection equipment (PPE), as well as NFPA-recommended methods of selecting PPE.

The second seminar, ["Safety-Related Maintenance,"](#) includes information on how building owners and facility managers can address insurance obligations, protect and extend the lifespan of electrical distribution equipment, while maintaining uninterrupted electrical service and a safe environment. It also addresses how employees working near energized equipment can stay safe, and how to properly respond to an emergency and mitigate risks.

To schedule an Empower Training Services Seminar, contact [Empower Training Services](#). Limited spots remain in 2019.
