Empower Training Services: Teaching Safety in the Workplace

Nearly two dozen participants attended a two-day Empower Training Services electrical safety seminar, hosted by Crosby Electric Company, Inc., at the Homewood Suites in Montgomery, Ala. on April 10-11, 2019.

ABM Franchising Group's Empower Training Services program offers comprehensive NFPA 70E on-site safety training and courses, including "Electrical Safety in the Workplace" and "Safety-Related Maintenance." More than 19,000 participants have utilized the program to learn about the dangers of arc flash and other electrical safety hazards.

Led by Joe Demonte, ABM Franchising Group's Director of Technical Training and Support, the two-day seminar covered two safety topics.

The first day of the training included the "Electrical Safety in the Workplace" seminar, which addressed electrical safety in the workplace, including Arc Flash, Arc Flash protection boundary and limits of approach, personal protection equipment (PPE), as well as NFPA-recommended methods of selecting PPE.

The second seminar, "Safety-Related Maintenance," included information on how building owners and facility managers can address insurance obligations, protect and extend the lifespan of electrical distribution equipment, while maintaining uninterrupted electrical service and a safe environment. It also addressed how employees working near energized equipment can stay safe, and how to properly respond to an emergency and mitigate risks.

Crosby Electric Company, Inc., plans to host another Empower Training Services seminar in October in Birmingham, Ala.

The Empower Training Services program offers a variety of training opportunities throughout the year. For a list of upcoming training opportunities and resources, **click here**.
