

ASG Electric Technician Receives NFPA 70E Certification

Congratulations to Jerry Kisgen, a technician for ASG Electric, for recently passing the **NFPA Certified Electrical Safety Compliance Professional (CESCP)** certification program!

The NFPA CESCP is designed to meet the needs of electrical and safety professionals who oversee electrical safety programs or manage electricians and other personnel exposed to electrical hazards.

The CESCP tests participants knowledge and proficiency regarding the NFPA 70E Standard for Electrical Safety in the Workplace practices and concepts.

According to the National Fire Protection Association's website, participants must meet a set of eligibility requirements prior to applying for the program, pass an examination and meet several certification requirements within three years of applying for the program.

ASG Electric Principal Chuck Fox congratulated Kisgen for receiving the certification and noted how the company's clients appreciate their staff's knowledge of NFPA 70E and other safety standards.

"At ASG we have found that our customers are quite impressed with the knowledge base and training programs we provide," Fox said. "The strength of these programs come from the content developed – and of course the CESCP is the credential that demonstrates an exceptional command of NFPA 70E standards."

ASG Electric in Madison, Wis., has been a TEGG contractor since 2008.
